## CONTENT

Chapter 1:
General introduction 9

Chapter 2:
A core outcome set for clinical trials on non-specific low back pain: study protocol for the development of a core domain set 27

Chapter 3:
Core outcome domains for clinical trials in non-specific low back pain 45

Chapter 4:
Roland Morris Disability Questionnaire and Oswestry Disability Index: which has better measurement properties for measuring physical functioning in non-specific low back pain? Systematic review and meta-analysis 75

Chapter 5:
A systematic review highlights the need to investigate the content validity of patient-reported outcome measures for physical functioning in low back pain 117

Chapter 6:
Measurement properties of Visual Analogue Scale, Numeric Rating Scale and Pain Severity subscale of the Brief Pain Inventory in low back pain: a systematic review 171

Chapter 7:
Evidence on the measurement properties of health-related quality of life instruments is largely missing in patients with low back pain, a systematic review 213
Chapter 8:
Core outcome measurement instruments for clinical trials in non-specific low back pain 257

Chapter 9:
6-, 8- and 10-item PROMIS Physical Function short forms display better psychometric performance than the 24-item Roland Morris Disability Questionnaire 295

Chapter 10:
The Pain Self-Efficacy Questionnaire: cross-cultural adaptation into Italian and assessment of its measurement properties 319

Chapter 11:
Responsiveness and minimal important change of the Pain Self-Efficacy Questionnaire and short forms in patients with chronic low back pain 339

Chapter 12:
General discussion 365
